VINIT RAMI

Cybersecurity Analyst | CEH v13 Certified | MSc Cyber Security, University of Portsmouth

+44 7799 227573 • ramivinit@gmail.com • London, UK • linkedin.com/in/vinitrami-002855228 • www.vinitrami.co.in

PROFESSIONAL SUMMARY

I am a CEH v13 certified analyst with over a year of hands-on VAPT experience across finance, healthcare, and government sectors, and I have just finished my MSc in Cyber Security at the University of Portsmouth. At 7HillsCyberWall I identified SQL injection, XSS, SSRF, and privilege escalation vulnerabilities in live production systems, writing reports that helped clients close 40% of critical findings within 60 days. My dissertation on phishing detection is now live on GitHub as PhishHawk, an open-source triage engine that flags 81.3% of 5,714 held-out real phishing emails with 0.8% false positives. I think like an attacker, and I want to apply that to detection and response in a SOC Analyst Level 1 role in London.

TECHNICAL SKILLS

Security Tools: Burp Suite, Nessus, Metasploit, Nmap, Wireshark, OWASP ZAP, Autopsy, Volatility
Penetration Testing: Web Application Security (OWASP Top 10), Network Pentesting, API Testing, CTF Competitions
SOC and Monitoring: SIEM, Threat Detection, Phishing Triage, Incident Response, IDS/IPS, Log Analysis, Malware Analysis
Threat Intelligence: MITRE ATT&CK, VirusTotal, URLScan.io, AbuseIPDB, AlienVault OTX, GreyNoise, STIX 2.1, MISP
Digital Forensics: Memory Analysis, Disk Forensics, OSINT Frameworks, Dark Web Analysis, Evidence Documentation
Networking: TCP/IP, DNS, DHCP, HTTP/S, Firewalls, VPN, Packet Analysis, Network Defence
Operating Systems: Kali Linux, Ubuntu, Windows 10/11, Windows Server, Parrot OS, Tails OS
Cloud and Identity: AWS Security (fundamentals), Active Directory (AD) Administration, Git/GitHub
Programming: Python (automation, FastAPI), Bash, Docker, PostgreSQL, GitHub Actions CI, Machine Learning basics (Scikit-learn)

PROFESSIONAL EXPERIENCE

Cybersecurity Auditor and VAPT Analyst

August 2024 – August 2025

7HillsCyberWall • Vadodara, India

- Conducted end-to-end VAPT assessments across finance, healthcare, and government sectors, identifying SQL injection, cross-site scripting (XSS), server-side request forgery (SSRF), and privilege escalation vulnerabilities in live production systems.
- Produced technical reports combining CVSS scores, proof-of-concept exploits, and plain-English remediation guidance, helping clients close an average of 40% of critical findings within 60 days of delivery.
- Executed web application testing using Burp Suite Professional and OWASP Top 10 methodology; infrastructure assessments using Nessus and Metasploit; network-layer analysis using Nmap and Wireshark.
- Presented findings directly to C-suite and technical teams in the same engagement, translating vulnerability data into business risk without losing technical precision.
- Re-tested patched systems and updated reports to confirm closure status, giving clients a complete audit trail for compliance and regulatory review.

Cybersecurity Researcher and Developer

August 2024 – October 2026

ITMBU Student Cyber Crime Cell • Vadodara, India

- Led research into emerging attack vectors and threat actor techniques, producing reports circulated to faculty and industry partners with practical rather than purely academic grounding.
- Designed and delivered awareness workshops reaching 200 or more students across Vadodara, covering phishing mechanics, social engineering tactics, and safe digital practices.
- Competed in CTF challenges and security simulation exercises under time pressure, sharpening both offensive and defensive practical skills.
- Co-organised cybercrime prevention events with local law enforcement agencies, connecting student research to direct community impact.

Cybersecurity Awareness Intern

January 2024 – March 2024

Urmi School Vadodara • Vadodara, India

- Delivered cybersecurity awareness sessions to school and college students on phishing, cyber fraud, social engineering, and responsible digital behaviour, making technical content accessible to non-technical audiences.
- Taught Python and Java programming to senior secondary students, adapting complex concepts into structured, classroom-ready lessons.

Research Intern

August 2023

Singapore Institute of Technology • Singapore

- Contributed to an ML research project on Solar Power Output Prediction, handling data preprocessing, model training with Scikit-learn, and accuracy evaluation across monthly energy datasets.
- Produced formal research documentation to university publication standards within a structured academic team.

Cybersecurity Volunteer

July 2023 – October 2026

HEXSOCIETY • Remote

- Shared threat intelligence, CTF writeups, and security resources in an open cybersecurity community, contributing to knowledge across practitioners at all levels.
- Mentored newer members on ethical hacking methodology and OSINT techniques.

EDUCATION

MSc Cyber Security and Forensic Information Security

September 2025 – September 2026

University of Portsmouth • Portsmouth, UK

Dissertation: *Phishing Attack Analysis and Detection (completed) • Final classification awaited*

Modules: Digital Forensics • Incident Response • Threat Intelligence • Security Operations • Advanced Network Security

B.Tech in Cybersecurity and Networking

October 2021 – June 2025

ITM SLS Baroda University (ITMBU) • Vadodara, India

CGPA: 8.16 / 10 • Specialisation: Cybersecurity, Network Defence, Ethical Hacking

CERTIFICATIONS

- Certified Ethical Hacker (CEH v13), EC-Council | Credential ID: ECC7846195302
- Digital Forensics Essentials, EC-Council / Mile2
- Digital Forensics Associate, EC-Council
- Network Defence Essentials, EC-Council
- Ethical Hacking Essentials, EC-Council
- Introduction to Dark Web, Anonymity and Cryptocurrency, EC-Council

KEY PROJECTS AND RESEARCH

PhishHawk: Phishing Triage Engine, built from my MSc Dissertation

• *github.com/vinitrami-Soc/phishhawk* • *2025 to 2026*

- Completed my MSc dissertation, *Phishing Attack Analysis and Detection*, studying how SOC analysts triage phishing alerts and analysing real phishing data with PhishTank, OpenPhish, VirusTotal, URLScan.io, and MXToolbox to find structural attack patterns.
- Turned the research into PhishHawk, now live and open source: it pulls every indicator from a reported email, unwraps Safe Links and redirects, catches lookalike domains even when SPF, DKIM, and DMARC pass, decodes QR codes, flags HTML smuggling, and maps findings to MITRE ATT&CK.
- Evaluated offline on 5,714 held-out real phishing emails (81.3% flagged) and 5,945 legitimate emails (0.8% false positives), at a median of 6 ms per message.
- Runs as a command-line tool and a self-hosted web app (FastAPI, React, PostgreSQL, Docker), with VirusTotal, URLScan.io, RDAP, and AbuseIPDB enrichment, STIX 2.1 and MISP export, and 600+ automated tests in CI.

IntelPulse: Threat-Intelligence Triage Workbench

• *github.com/vinitrami-Soc/intelpulse* • *2026*

- Takes a pasted alert, raw syslog, or SIEM export, extracts the indicators, and queries AbuseIPDB, AlienVault OTX, GreyNoise, ThreatFox, and URLhaus concurrently, scoring them into one auditable verdict.
- Writes a Jira-ready SOC ticket with MITRE ATT&CK mapping and containment steps. Built with FastAPI, async httpx, Celery and Redis, PostgreSQL, and Docker, with 200 backend tests and browser test suites in CI.

ADDITIONAL

CTF Competitions: Regular international participant. Competing under real time pressure builds triage speed that is difficult to develop any other way.

Security Content: Publish technical content on LinkedIn and Medium covering VAPT methodology, phishing triage, Python security scripting, and threat trends for an active technical readership.

Clearances: Valid DBS Certificate (UK police verification). Available to start immediately.
